DOCX to PDF Converter

A simple Python tool to **convert Word (.docx) files into PDF** in batch mode.
It keeps everything organized with three folders:

- `input/` → Place your `.docx` files here
- `outputPdfs/` → Converted `.pdf` files will be saved here
- `convertedDocs/` → Original `.docx` files are moved here after conversion

This ensures no duplicates are processed on the next run.

Features
- Batch converts multiple `.docx` files in one run
- Automatically organizes files into input, output, and archive folders
- Prints a summary report after each run
- No duplicate processing — converted docs are moved away
